

Range Sustainment

Range Operations

AFCEE'S RSU can contract all aspects of range operations support from controlling aircraft and conducting range and target maintenance to installation and operation of scoring systems, and equipment and grounds maintenance. Our staff is ready to work with you to enhance your readiness through operations support.

Range Residue Resource Recovery

The RSU has a successful track record in handling range residue, from the large jobs at the Nevada Test and Training Range, to the smaller jobs at the Air National Guard and Air Force Reserve Command Ranges. We call it resource recovery, because we focus on efficiency, while recycling the greatest amount of material possible, to provide the best value to you, the customer.

Range Planning

AFCEE has experienced master planners and environmental planners, ready to assist with your range planning needs. In addition, we have more than two dozen prime contractors, who have the expertise to support your range planning requirements. So, from a Comprehensive Range Plan to an integrated natural resources management plan or cultural resources management plan, the RSU can help you meet or exceed your requirements.

Mission

The Air Force Center for Environmental Excellence's Range Support Unit is a customer-focused multi-disciplinary team providing range managers with a comprehensive array of essential technical or project management services tailored to meet their specific needs.

Vision

The AFCEE Range Support Unit will set the pace for the DOD by providing world class customer oriented support to the Air Force's far-reaching sustainable range management goals.

Customer Service Policy

We will treat each customer as our only customer. We will provide the finest services available to meet the specific requirements of every customer, no matter how small or large their need.

R4 - Range Residue Resource Recovery at NTTR

Military Munitions Response Program (MMRP)

Goal of Air Force MMRP

To make Air Force military munitions response sites safe and clean for reasonable anticipated future use.

NRL MTADS at Badlands Bombing Range

Program and Execution Support

AFCEE provides a full spectrum of services in support of the Military Munitions Response Program. These services include program development and planning and programming support for the Air Staff and MAJCOMs. From site assessment, and UXO location and removal using state of the art technology, to site closeout and public relations support, AFCEE's contractor tool box offers the full range of services to support your execution of the MMRP.

Strategic Planning Assistance for the Future of Air Force Ranges

Strategic Planning – Reduction of Potential Future Encroachment

Innovative and far-reaching solutions, which may be implemented in a phased approach, can reduce or eliminate the potential for future encroachment. AFCEE is working on a systemic approach for the Air Force to address this issue. Your particular problem may have a simple solution, or may require custom engineering. Either way, AFCEE can fulfill your needs to ensure smoother operations as the future Air Force arrives.

Global Hawk

NEPA Support for Range Expansion/Mission Changes

As the Air Force transitions into a new era of prosecuting combat from the air, our ranges will require modernization, and analysis of the environmental impacts of this transition. From design of advanced targeting arrays and systems and replacement of the old targets with the new, to compliance with environmental regulations, AFCEE has the resources now, to support our Air Force ranges in the coming transition.
